

A photograph of a museum gallery. The ceiling is a vibrant blue with a starry pattern and several circular inset images of historical artifacts. The floor is dark wood. On the left, there is a large wooden cabinet and a display case containing a model of a city. On the right, there are several glass display cases containing various objects. The lighting is focused on the exhibits.

BARRISOL[®] Ecology and Sustainable Development p.37

As with other Barrisol sheets, the installation of a printed Barrisol sheet provides the perfect finish for any room. The installation of Barrisol sheeting is clean and fast with very little disruption for the client.

Barrisol's ceilings can be adapted to all types of spaces. Barrisol ceilings can be removed and reinstalled at any time to gain access to the area above the ceiling. Access to mechanical and electrical systems above the ceiling is fast and easy.

Barrisol ceilings can help introduce vibrant colors into any space. Printing on Barrisol offers unlimited creative possibilities by offering 130 different colors and 7 unique finishes. The only limit is the designer's own imagination.

Thanks to the Barrisol Translucent line of sheeting, it is possible to combine overhead lighting systems and Barrisol sheeting to create your own, one-of-a-kind lighting elements. When lit from above, Barrisol Translucent sheets provide a diffused light and enhance the images printed on a Barrisol sheet.

The combination of printed images and Barrisol Acoustics® sheets provides designers a very effective tool for optimising acoustics without sacrificing design. Sound attenuation is subtle and attractive with Barrisol Acoustics® sheets.

The Barrisol's sheets are classified M1 (Class 1 or Class A) for fire safety and can be installed in public places in accordance with local regulations.

As with all Barrisol sheeting collections, Barrisol printed sheets are 100% recyclable. Barrisol promotes the protection of the environment and recently came out with its Recycled line of sheeting products. Sheets in the Recycled line are composed of 50% recycled material.

Architecte: Abbas Merchant from MBEM

Classic printed

Barrisol ceilings can be used to enhance the decor of any space. Stylish and completely adaptable to any space, Barrisol's wide variety of potential applications is further increased by the ability to print directly on the sheeting.

Photographs, artwork, corporate logos, etc., can easily be printed on any one of Barrisol's 130 colors and the 7 finishes. Designers do not have to settle for a standard finish or color, by printing on the Barrisol sheeting they can create their own one-of-a-kind ceiling.

Architectes : Sala-Rodrigo, Barros Tome-Tedros

Design

The images printed on Barrisol sheets help to create a truly unique atmosphere. The images can enhance the overall design of a room by complimenting other design elements in the space.

Images, such as a peaceful landscape or an ocean / beach scene can be used to create a more relaxing environment. Ordinary objects, cityscapes or corporate logos can be used to create different effects. Images of almost any type can be printed on Barrisol from the most traditional to the most avant-guard.

Utilization

Printed Barrisol sheets offer a wide variety of interior design application options. Children's bedrooms, dining rooms, restaurants, cinemas, corporate offices or trade show booths, all of these spaces and more can utilize printed Barrisol to reinforce any message or theme a designer is trying to convey.

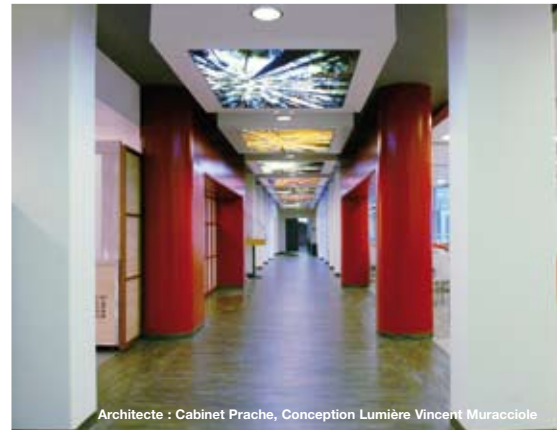

Architecte : Leopoldo Vezzioni

Translucent printed

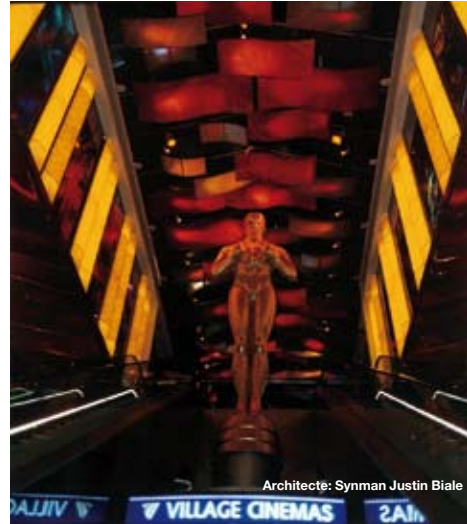

Combined with an integrated lighting solution, printed Barrisol sheets allow for a whole new level of creativity. Enhanced by the light from TLs, LED's or fiber optics, the printed images on walls, ceilings or 3D shapes push back the limits of interior design. Printed Barrisol sheets that are lighted from behind offer an intriguing combination of aesthetics, elegance and functionality.

Architecte : Cabinet Prache, Conception Lumière Vincent Muracciole

Design

The light added to printed Barrisol sheets used on walls, 3D shapes, fixtures or ceilings, helps dramatically enhance each image. The ability to change the color of the lighting allows you to change the look and feel of the image and set an entirely different tone for the room.

Architecte: Synman Justin Biale

Architecte : Atelier Oz

Utilization

Printed Barrisol sheets, when used in conjunction with an integral lighting system, help to enhance the uniqueness of any space.

Living rooms, game rooms, nightclubs and even event structures can all benefit from the creative use of Barrisol. Anywhere the creation of a unique atmosphere is desired by combining both a printed image and subtle lighting. Lighting systems that change colors can also be used in hospitals and clinics to provide a subtle, calming and tranquil environment during treatment.

Architecte: Lexus

Architecte : Yann Nussame - Architecture Milieu Territoire

Design : Normalu - Barrisol

Architecte: Musimundo

3D Printed

Thanks to Barrisol Normalu's innovative perimeter rail and support systems, it is possible to create all types of shapes: circles, waves, curves, diamonds, crystalline shapes, right angle turns, cones, etc. All of the elaborate sub-structure is then covered with printed Barrisol. Barrisol 3D printed creations can be customized to fit any location.

Architecte: Diego De Risi

Design

3D Barrisol shapes dress up any space. By altering both shape and volume, structures become full-fledge architectural features with an infinite number of possible designs. The printed Barrisol placed on them helps reinforce the tone the designer is trying to set within a space. The wide palette of colors and finishes available allow the designer complete freedom of expression.

Utilization

3D printed Barrisol is best used anywhere the creation of unique volumes, the enhancement of design themes or the utilization of a specific image or corporate brand is desired.

For cinemas, kitchens, inside corporate offices, trade show exhibits or special events structures, printed 3D Barrisol creations can support a design theme and reinforce a brand or image.

Acoustic printed

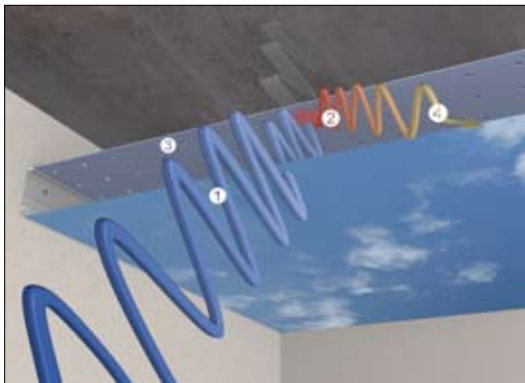

rinted Barrisol sheets can also be formidable tools for acoustic noise reduction by using an acoustic Barrisol sheet in conjunction with a classical printed sheet.

When installed in a loud space such as cinema, meeting room, dining room or home cinema room, these sheets absorb excess sound energy and promote acoustic comfort and speech intelligibility.

Acoustic printed

Acoustic printed ceilings are achieved by combining a lower, printed sheet layer and an upper, acoustic sheet layer. The visible printed sheet, when contacted by a sound wave, begins to vibrate. This vibration takes energy from the sound wave. When the sound wave hits the acoustic sheet above, it is forced into the micro-perforation holes that help to convert the energy of the sound wave into thermal energy. This energy transfer further decreases the energy of the sound wave and helps to decrease reverberation in a space. (See the diagram below)

- 1 Initial sound
- 2 Sound transformed into thermal energy
- 3 Barrisol Acoustics®
- 4 Reduced sound

Barrisol Acoustics®

BARRISOL ACOUSTICS® is a line of sheeting intended to absorb sound. Micro-perforations in a Barrisol sheet reduce sound by converting acoustic wave energy into thermal energy as the sound wave is forced through the perforation holes. Additional friction is caused by the wave moving through air between the Barrisol sheet and the ceiling above.

BARRISOL ACOUSTICS® line is composed of four different sheets: Microacoustic®, Miniperf®, Acoperf® and Microperf®. Each sheet varies in the density, pattern and diameter of the micro-perforations.

The acoustic technology contained within BARRISOL ACOUSTICS® sheets offers spectacular sound attenuating results while remaining attractive in any setting.

Image Portfolio

Barrisol offers a collection of standard images that can be printed on any sheet. These images are divided into these 9 categories:

- Patterns • Food and Beverage • Animals
- Flowers • Nature and Landscapes • Art
- Zen • Wonders of the World • Illustrations

Custom images can also be printed on Barrisol sheeting.

Sheets with images printed on them can be installed either inside or outside. Images kept away from ultraviolet light are offered with a 10-year discoloration warranty.

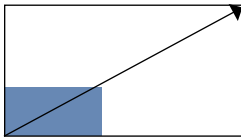

► **Barrisol sheets available for printing**

It is possible to print images on the following Barrisol sheeting lines: brushed suede, lacquers, metallic, satin, matt and translucent.

► **Images to provide for printing**

The picture or image to print must be provided in the highest resolution possible. In order to ensure maximum clarity, the image files must be provided in: 1/10th scale to the sheet on which it will be printed, be in either EPS vectorised (preferred) or PDF format, in a minimum resolution of 300 DPI and in CMJN.

For example: if the printed sheet dimensions are 2m*1m, the image file must have a minimum size of 20cm*10cm with a resolution of 300 DPI.

Warning: It is not recommended to print mostly black images as the image quality and clarity may vary across the image.

► **Printed size without seems**

The maximal width for printing 2m15 (or on special order 2m50).

► **Information to provide for printing**

A diagram of the exact position of the image on the sheet and the exact dimensions of the image on the sheet will be required.

► **Lead-time for printing**

The lead-time for printing is 3 weeks (from receipt of complete information).

► **Original Material**

Barrisol requires that artistic and photo credits be given to the creator of any original image.

In order to submit an original image for printing, the permission of the artist or the reproduction rights for the image must first be obtained by its creator or current image licensee. Barrisol is not responsible for images printed without proper permission.

Create your own custom

PATTERNS...

Printed Barrisol sheets can be adapted to the unique demands of any project. Custom printed Barrisol's images are a complex combination of pattern, background and color that are customized for each project.

► Dimensions

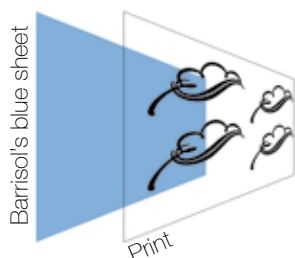

The patterns are fully scalable. To make it possible, the size of the original patterns is used as a reference. See Step 1.

► Colors

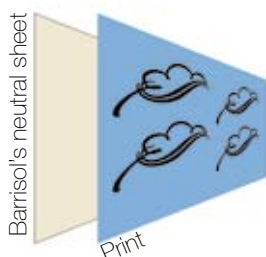

When choosing a background color:

1. The pattern can be directly printed on a white or colored sheet
2. The color of the image can be changed and the image can be printed on a neutral colored sheet. See Step 2.

Pattern printed on colored sheet

Pattern and background printed on neutral sheet

Final

The original color of the image is for reference only. It is possible to choose any color for the final image (according to the modalities CMJN or CMYK or Pantone). See Step 3.

By manipulating the digital image, it is possible to see the image and the background in a variety of different colors to make sure that the final sheets has just the right look.

Example of a two-colored pattern

► Creation

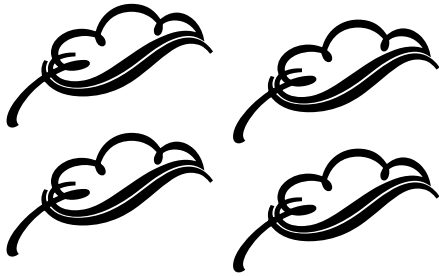

The patterns contained in this brochure are standards. Original, custom images are also possible.*

* Contact us for image restrictions and limitations

Step 1 : Sizing the image

The dimension of the patterns can be modified as required.

pattern in real size

pattern to 200% of the real size

pattern to 75% of the real size

Step 2 : Selecting background color

The choice of the background color is very important. Images can be printed on one of Barrisol's neutral sheets or on one of Barrisol's 130 colors.

Green background

Pink background

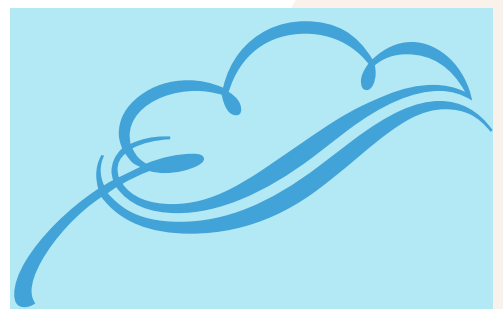

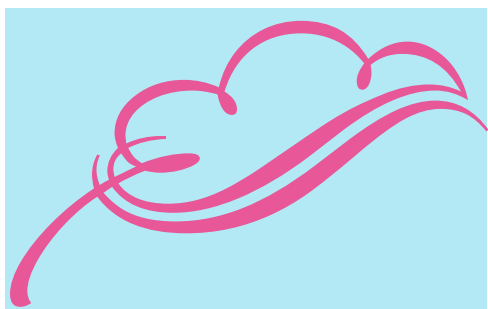

Blue background

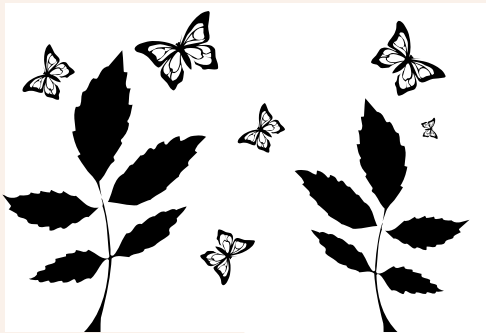

Step 3 : Selecting the image color

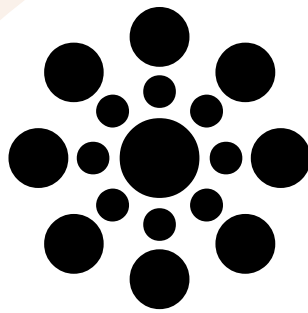

Choice of the pattern color (according to the modalities CMJN or CMYK or Pantone).

Barrisol, Ecology and Su

In 2007, Barrisol Normalu SAS celebrated its 40th year. Over the years, Barrisol, the creator of the stretch ceiling industry, has placed innovation at the center of everything it does.

The experience of a leader

The first stretch ceiling was manufactured by Normalu in 1969. The Barrisol brand was created in 1975. Today, the entire collection of Barrisol sheets composes over 20 unique systems of stretch ceilings.

Strength of innovation

For Barrisol, utilizing technology to constantly improve its products and processes has allowed it to stay far ahead of the competition.

By helping to establish new industry standards and procedures, Barrisol Normalu continues to reinforce its position as the worldwide leader in the stretch ceiling industry.

Design & interior decoration

Ceilings and walls are as important in helping to set the tone for a space as is the layout of the space itself. The potential for ceilings or walls to serve as integral design elements is too often underestimated. Barrisol offers a diverse palette of more than 130 unique colors.

Choose a texture, finish, printed image, lighting element and your Barrisol ceiling can provide you with almost any look or feel you desire.

A team approach to innovation

At Barrisol Normalu, creativity is not the work of only one person. The innovative solutions of the Barrisol Normalu SAS group are the result of a collaborative approach. This collaboration allows our R&D technicians to come up with product innovations and applications that constantly keep Barrisol Normalu at the forefront of the industry.

We are never very far away

The Barrisol network contains 1,200 partners on 5 continents, in more than 110 countries.

“ In order to make the you first need to

This interactive network provides you with creative and technological support of a vast global enterprise combined with the attention and service of a local representative.

Barrisol Normalu SAS considers the impact on the environment in all the decisions it makes. Respect for the environment is one of Barrisol Normalu's core values. An example of Barrisol Normalu's commitment to the environment can be seen in its development of recycled and recyclable products and its corporate culture.

Recycling and environmental preservation

Barrisol sheets are 100% recyclable. After their useful life, Barrisol sheets can be recycled into others products of Barrisol Normalu such as the Thermalu radiant heating system or Barrisol's Recyclable line of sheeting. These products are ideal for any projects attempting to reflect "green design". The perimeter rails and support elements are also 100% recyclable. This effort to protect the environment is critically important when you consider that more than 1 million square meters of stretch ceilings are installed throughout the world each year.

sustainable Development

world of tomorrow more beautiful,
work to preserve the world today. ”

Barrisol Normalu's manufacturing process does not require the use of water, which allows it to help conserve this vital, natural resource. In the production of sheets, no CFC's or HCHC's are emitted and no cadmium is used in the manufacturing process.

Intrinsic qualities

Thanks to the quality and variety of the finishes, Barrisol's stretch ceilings do not need to be painted. This helps to reduce the number of chemicals and solvents used on most construction projects. Barrisol sheets that provide a high degree of reflection, such as Lacquers, can even reduce the number of lights in a space and therefore reduce electrical consumption. Barrisol can be removed and reinstalled whenever access to the area above the ceiling is required. Removal and reinstallation of Barrisol can be done with very little disruption to the owner.

Barrisol stretch ceilings are lightweight 1000 square meters (10, 260 square feet) of Barrisol weighs around 500 kilos (1, 102 pounds) including the perimeter rail. Because it is so lightweight, Barrisol also takes far less energy to transport to the jobsite.

Lastly, because each individual Barrisol sheet is custom made for each application Barrisol generates approximately 20 times less waste than conventional ceiling materials.

Social Responsibility & Sustainable Development

In order to limit the amount of waste it produces, Normalu will take back and recycle all Barrisol sheets at the end of their useful life.

The offices of Normalu are equipped with the Thermalu radiant floor heating system to provide its employees a more comfortable working environment. Thermalu, a product of Normalu, was selected over other suppliers because its products contain over 50% recycled content. Normalu also provides car pool vehicles to its employees to help reduce traffic congestion and reduce the emissions of CO².

Normalu's offices are also equipped with photovoltaic and motion sensors that ensure that the lights come on only when needed during daylight hours and turn off automatically at night if no movement is detected in the office.
